

Generative AI Assistant

For AIOps & Observability

Generative AI is revolutionizing many fields of computing, including IT and AIOps. With CloudFabrix Macaw generative assistant, IT operations personnel can streamline operations, elevate decisions and boost productivity in three specific use case categories.

Productivity Centric

Automate the creation of key artifacts, configurations and integrations. Advance from low-code to no-code

Create Dashboards, Pipelines, Bots, Service Blueprints ...

Operational Data Centric

Understand and interpret operational data for elevated decision making and operations

Incident summary, Reason for alerts, Recommended actions, Topology questions...

Intent Driven Automation

Automate intent based operations at scale. Customize behavior with new intents

Put device in maintenance, Find device, Submit change window, Update CMDB ...

Streamline Your Operations. Elevate Decision-Making. Boost Productivity.

- **Flexible Deployment:** Azure OpenAI or local LLMs
- **Multiple Interfaces:** Chat app, API, bots, AI dashboards
- **Customizable Intents:** Easily create and manage operational intents
- **RAG Implementation:** Combines intent mapping, data retrieval, and vectorization for precise results
- **Hallucination Control:** Utilizes embeddings and advanced intent routing to effectively manage and minimize AI hallucinations
- **Data Governance:** Ensures secure and compliant handling of operational data.
