

Real Time Asset Intelligence & Analytics

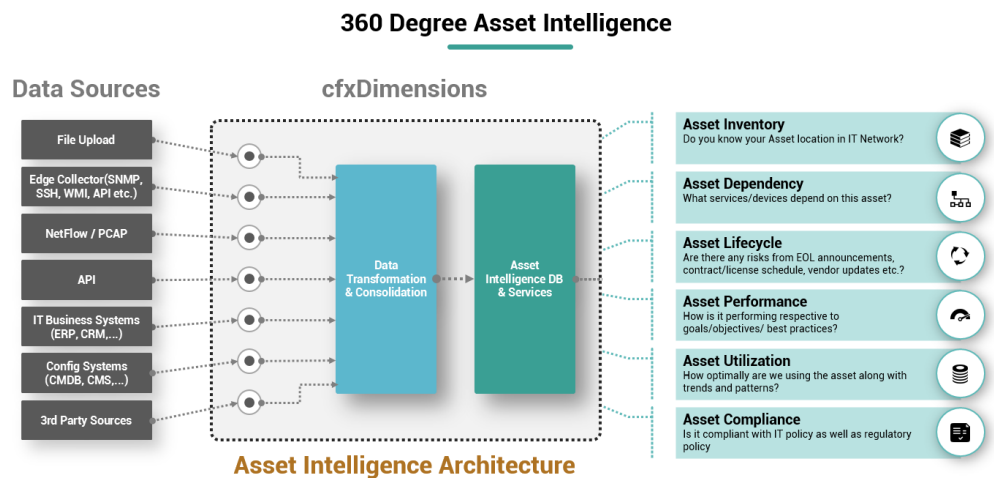

With an ever-changing IT asset landscape, IT environments have become more complex and dynamic. Paradigm shifts like software defined networks/datacenters, multi-cloud, 5G, consumption based models etc. are requiring enterprises to gain deep visibility into all IT assets, identify and manage risks, plan and strategize migration and consolidation projects - built upon real-time asset intelligence & analytics capabilities.

- Real-time visibility into IT assets
- Asset dependencies and relationships
- What assets are at risk from lifecycle events?
- Understand assets usage and capacity
- Where are my cost optimization opportunities?

CloudFabrix Digital Intelligence AIOps platform, cfxDimensions, provides real-time IT asset visibility, utilization and dependencies, along with key insights about upcoming lifecycle events (like end of sale/support/life), supportability risks due to missing or out-of-contract assets, identify non-compliant assets and measure/track enterprise specific plan of record or compliance policies. This enables IT organizations to not only optimize their existing IT environments, but also effectively plan, track and implement digital transformation initiatives like network refresh with SDN, datacenter consolidation, move to multi-vendor infrastructure etc.

Gain full IT asset visibility, minimize supportability risks, identify cost saving opportunities and enable transformation initiatives

cfxDimensions leverages powerful agent-less enterprise discovery, dependency mapping, hardware and software asset inventory, lifecycle analytics, vendor API integrations, data ingestion and machine learning capabilities to provide real-time and holistic 360-degree asset intelligence. cfxDimensions leverages integrations with over 100 data sources to deliver critical insights across asset lifecycle, utilization and spend using out of the box easy-to-understand dashboards.

Key Benefits

 <p>Automate IT asset inventory and lifecycle data collection</p>	 <p>Support for multi-vendor HW, SW and subscription offering</p>	 <p>Automate contract data ingestion for risk analysis</p>	 <p>Effective management of EOL, EOS and security risks</p>	 <p>Insights on license compliance and risks</p>	 <p>Support contracts quality health scores</p>
--	--	---	--	---	--

Key Capabilities

Asset Utilization

- Asset deployment and utilization
- Reduce oversubscription

Optimize Spend

- Visibility into license purchased and installed
- Intelligently plan and budget for new equipment

Automated Inventory & Reporting

- Complete visibility into Asset portfolio & Reporting
- Automated data ingestion

Lifecycle Management

- Asset lifecycle insights
- Contract status
- Mitigate EOL, EOS risks

Self Service Web Portal

- Persona based Dashboards
- Customizable Reports (Daily, Weekly, Quarterly)

Real Time Data Ingestion & Integrations

- Any Data, Any Source, Instantaneous
- Extensible Data ingestion architecture
- Native integrations with over 100+ widely used systems and tools

Key Use Cases

IT Budget Planning	Complete visibility into HW/SW assets deployed, depreciation, usage and future needs with what-if-scenario analysis.
Asset dependency mapping	Learning dependencies across services, application and infrastructure to help impact analysis during incident resolution, migrations etc.,
Asset Utilization Management	Complete view into asset deployment and utilization. Optimize subscription spend
Support and compliance risk management	Discover and track End of Life, End of Sale, End of Support, Contract risks, compliance and renewal opportunities.
Single source of truth for assets	Standalone asset DB service or integration with existing CMDB systems to keep it up to date.
Enable dynamic consumption models	Real-time metering of compute/network and storage service for both on-prem and edge deployments

Key Technologies / Integrations

Clouds

Datacenter

Monitoring

Collaboration Tools

Asset Inventory

ERP / CRM

Storage

Servers

VMs

Containers

Microservices

Applications
